

SUMMER TIPS

towards a beautiful, clean and safe neighborhood

The Grass Is Always Greener

Because We Water It

Although we have the irrigation system in place, your effort to water the grass, bushes and trees around your unit would keep our landscape alive and thriving in green. Remember, the best times to water are in the morning, before 10 a.m.

Camellia Bushes Are Found

At The Neighborhood Entrance

Did you know we have Shishi Gashira Camellia bushes welcoming you each time you enter the neighborhood? These particular Camellias are pink in color and are especially long-lasting when they bloom (for 12-16 weeks, usually late October until late January).

Mosquito Bites Bring Disease

Help Keep Them Away

You will have noticed the "Fogging" truck that comes periodically to fumigate our neighborhood against mosquito infestation. Please check your surroundings for stagnant water which promote mosquito breeding. Your help will keep us all healthy.

Summer Time Is Outdoor

Play Time For The Kids

Please drive slowly and carefully to help you avoid children running after a loose ball. Let us keep our neighborhood a fun and safe environment everyone, young and old.

Keep Our Dumpster Area Clean

It Saves Us All Money

If your discard item does not fit through the dumpster door, you need to bring the item to the Landfill located at 8305 Blountstown Highway (Tel: 850-575-1636). Dumping bulky items at the dumpster area will result in removal cost to the Condo Association, and lead to higher monthly Condo fees in the long run. If all of us make a little effort in this, we will all benefit both aesthetically and financially.

We are proud to be part of this wonderful neighborhood, and welcome suggestions from you to keep us at award-winning quality or even better. Send your suggestions and ideas to:
